# Automation, accelerated.
Powerful tools for every process.

How to harness the many benefits of the Microsoft Power Platform in your organisation.
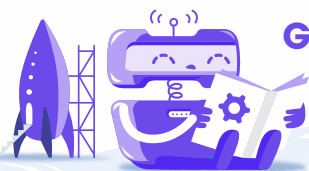

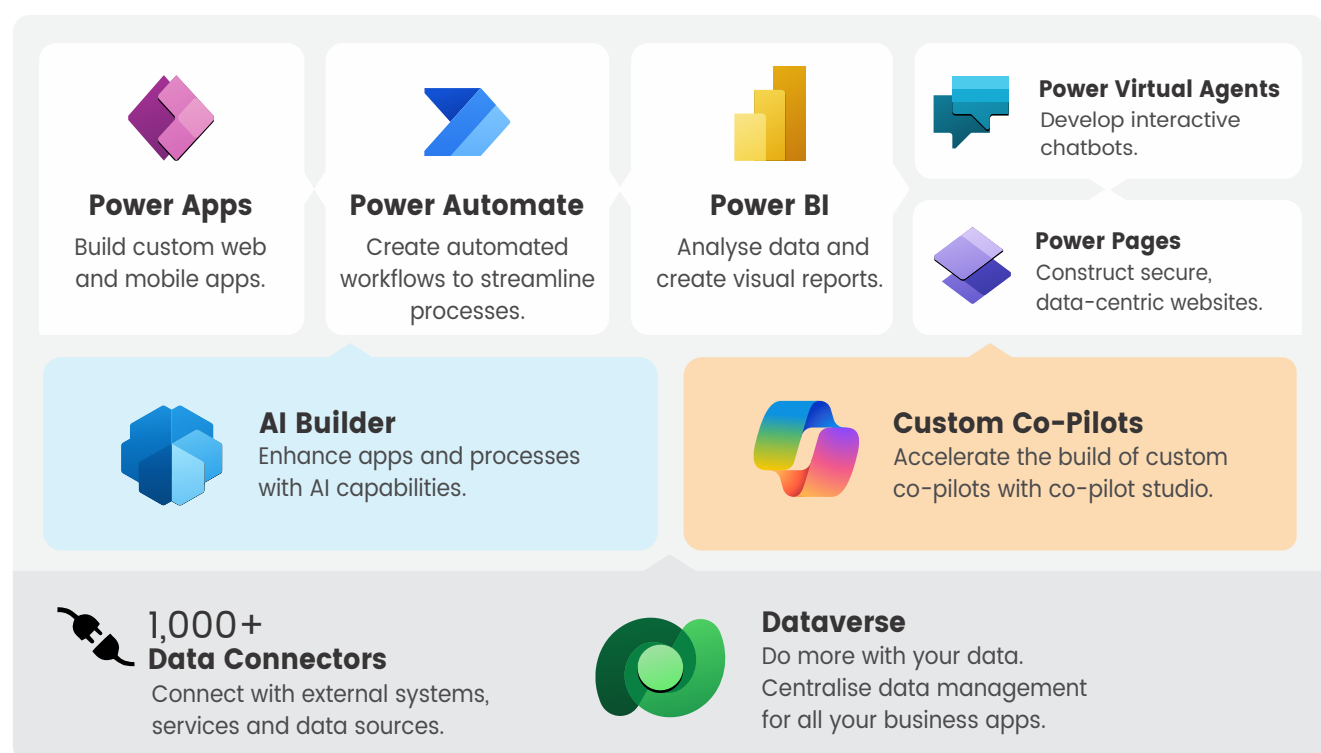

What is the Microsoft Power Platform?

A suite of tools that helps you build custom apps, automate routine tasks, analyse data for insights and integrate AI into your solutions.
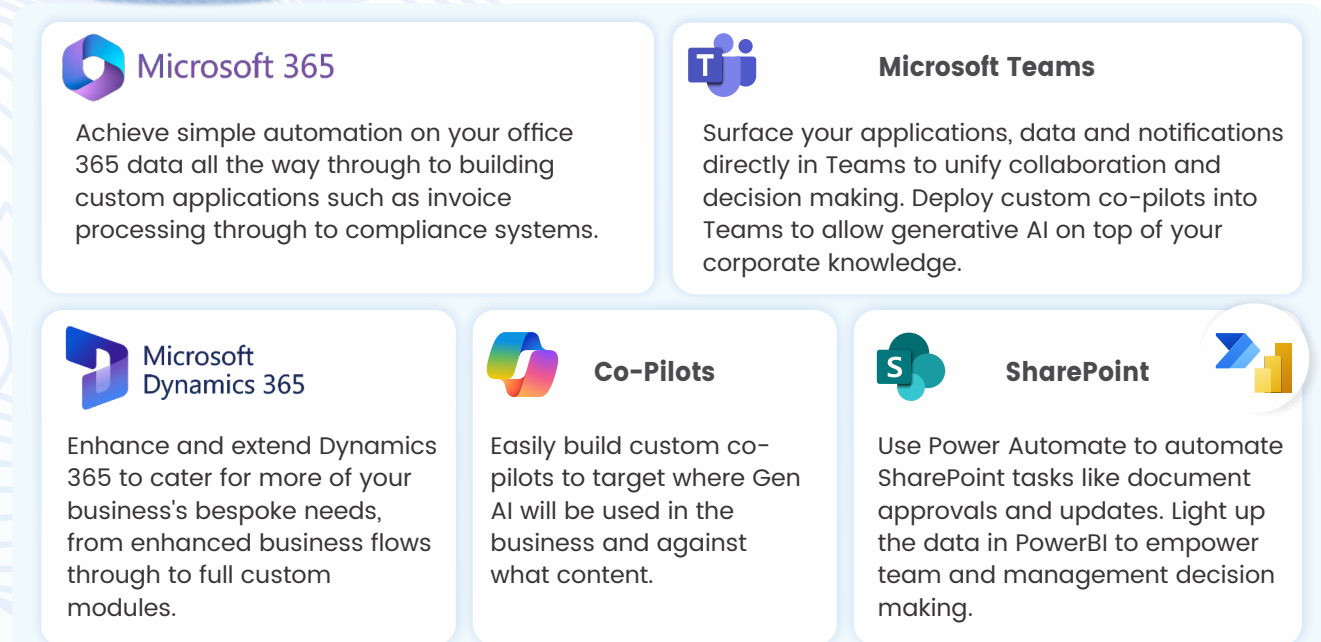

How does it enhance your IT setup?

The Power Platform works seamlessly with your daily Microsoft tools and connects with other software, thanks to 1000+ out-of-the-box connectors, custom APIs and data gateways. It's built for flexibility, fitting well into any business environment.

Power Apps
Build custom web and mobile apps.

Power Automate
Create automated workflows to streamline processes.

Power BI
Analyse data and create visual reports.

Power Virtual Agents
Develop interactive chatbots.

Power Pages
Construct secure, data-centric websites.

AI Builder
Enhance apps and processes with AI capabilities.

Custom Co-Pilots
Accelerate the build of custom co-pilots with co-pilot studio.

1,000+ Data Connectors
Connect with external systems, services and data sources.

Dataverse
Do more with your data. Centralise data management for all your business apps.

Get more from your other Microsoft tools

Create a highly connected and automated ecosystem to improve productivity and operational efficiency.

A few of many use cases:

Microsoft 365
Achieve simple automation on your office 365 data all the way through to building custom applications such as invoice processing through to compliance systems.

Microsoft Teams
Surface your applications, data and notifications directly in Teams to unify collaboration and decision making. Deploy custom co-pilots into Teams to allow generative AI on top of your corporate knowledge.

Microsoft Dynamics 365
Enhance and extend Dynamics 365 to cater for more of your business's bespoke needs, from enhanced business flows through to full custom modules.

Co-Pilots
Easily build custom co-pilots to target where Gen AI will be used in the business and against what content.

SharePoint
Use Power Automate to automate SharePoint tasks like document approvals and updates. Light up the data in PowerBI to empower team and management decision making.

Streamline tasks and data across all your business systems

The Microsoft Power Platform connects with external systems, services and data sources in finance, HR and other areas.

1,000+ Data Connectors
Integrate your Power Platform tools with the solutions you use every day, including SAP, Salesforce, Oracle, Workday and many more.

No pre-built connector? No problem:
Create custom APIs to connect your business systems with the Power Platform.

SAP
workday
ORACLE
salesforce
Business Apps and Data

Unified data management:
Bring external system data into the Dataverse, making it simpler to manage data and automated processes.

What skills and expertise are needed?

While simple apps can be pulled together relatively quickly using the Power Platform's low-code tools and generative AI support, a guiding hand from Power Platform experts can vastly reduce the time spent learning the tech, and creating apps and processes. For more than just basic projects, partnering with someone who has a deep technical understanding of systems development, architecture design and technical governance is highly beneficial.
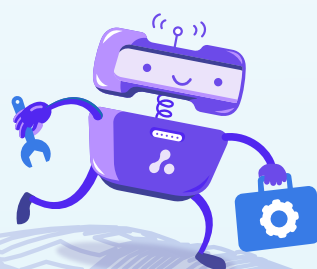

How can jaam help?

As Microsoft continues to expand and improve the Power Platform, the potential to solve complex business issues grows. The team at jaam automation provide the expert assistance you need to fully leverage these tools, ensuring you maximise the platform's benefits for your business.
